ABOUT ME

Software engineer with 2+ years of experience building backend systems, data pipelines and web and mobile apps on top of them. Shipped and operated a production platform with 8,300+ products and 31,000+ images, owning it from scraping to deployment.

WORK EXPERIENCE

IQUESTER SOLUTIONS LLP | MAR 2026 – PRESENT

Food Check: product-data platform for Indian packaged foods (Python, FastAPI, PostgreSQL, Next.js, React Native, Docker)

- As primary developer, built a platform that scrapes quick-commerce listings with Playwright into PostgreSQL: **8,300+ products and 31,000+ images**, with **OCR image tagging** for ingredients and nutrition.
- Built a token-authenticated data ingestion and **review pipeline** with 2FA-protected approvals and automated completeness scoring.
- Traced **33,800+ orphaned images** to their root cause from logs and queries and recovered them with an **idempotent script**.
- Built the Next.js web app and an Expo / React Native Android app (OTP login, wishlists, voting, infinite-scroll search, admin review).
- Set up **CI/CD** with GitHub Actions (signed APK, release, SSH deploy) and Docker Compose behind Caddy, with git-SHA version checks.

D2C brand data pipeline

- Built an async Python scraper with Gemini-based classification that qualifies D2C brands at **about 0.25 INR per site**.

ERP and WordPress (PHP, Dolibarr, WooCommerce)

- Built Dolibarr modules: a sales-order dashboard linking POs and raw materials, and a **two-way WooCommerce order sync**.
- Published **IQ Jobs Manager**, a WordPress.org plugin with an application pipeline, CSV export and analytics.

RXEFY TECH PVT LTD — INTERN → FULL-TIME | JUL 2024 – MAR 2026

- Built an **event-driven, DB-backed Laravel queue** where listeners trigger self-terminating workers (run once, exit when idle), eliminating persistent daemons and reducing CPU load on low-config hosting.
- Built **5+ reusable Laravel packages**: foundation, user management, organisation, integrations and messaging channels. They removed duplicated code across client projects.
- Designed a **multi-tenant backend architecture** and integrated Zoho Books, WhatsApp and Telegram APIs.
- Contributed **UI components** to **Wrappid**, an in-house React framework.

SKILLS

Languages: Python, PHP, JavaScript
Back-End: FastAPI, Laravel, REST APIs, async processing, job queues, multi-tenant design
Front-End: React JS, Next.js, React Native, Bootstrap, Tailwind CSS
Database: PostgreSQL, MySQL, MariaDB, SQLAlchemy, Alembic
DevOps / Tools: Docker, Docker Compose, GitHub Actions, Caddy, Git, DigitalOcean (Droplets), Playwright

EDUCATION

Master of Computer Applications, Techno India Hooghly | 2022-2024 | CGPA 8.71
B.Sc in Mathematics, Barasat College | 2018-2021 | CGPA 9.10
